

AMBCO MODEL 2500

HOW TO CLEAR "MEMORY FULL"

Turn off the 2500 and the printer, disconnect the printer cable. It's the cable that goes from the 2500 to the printer.

Turn on the 2500 and allow it to cycle to the time / date display.

Press and hold "PRINT" key (about five seconds) until unit displays "printing 000, 001, 002, 003 . . .".

Then it's OK to release "PRINT" key.

After sequence stops, about 90 seconds, unit returns to time / date display.

Reconnect the printer cable, turn the printer back on and resume testing.
